REASONS FOR ALLOWANCE

1. This Office Action is responsive to the Supplemental Amendment filed on 1/9/06.
2. Claims 1-12 are allowed.
3. The following is an examiner's statement of reasons for allowance:

-Regarding to independent claim 1, none of prior art of record teaches or suggests a method for synchronizing a base station to a mobile station, as claimed. Maskara et al, (previously cited), teaches the claimed method except that in his method, he teaches a signal sequence as claimed, but he fails to teach a procedure of transmitting said signal sequence from a base station to a mobile station in a synchronization channel wherein the mobile station uses said signal sequence to determine a timing of the base station, and achieves timeslot synchronization between the base station and the mobile station using the synchronization channel. It would not have been obvious for one skilled in the art to implement Maskara et al in view of other prior art of record for leading such the implementation to the claimed invention.

-Regarding to independent claim 10, none of prior art of record teaches or suggests a base station, as claimed. Maskara et al teaches the claimed system except that in his system, he teaches a signal sequence as claimed, but he fails to teach a procedure of transmitting said signal sequence from the base station to a mobile station in a synchronization channel wherein timeslot synchronization is achieved between the base station and the mobile station using the synchronization channel. It would not have been obvious for one skilled in the art to implement Maskara et al in view of other prior art of record for leading such the implementation to the claimed invention.

-Regarding to independent claim 11, none of prior art of record teaches or suggests a mobile station, as claimed. Maskara et al teaches the claimed system except that in his system, he teaches a signal sequence as claimed, but he fails to teach a procedure of receiving said signal sequence from a base station to a mobile station in a synchronization channel wherein timeslot synchronization is achieved between the base station and the mobile station using the synchronization channel. It would not have been obvious for one skilled in the art to implement Maskara et al in view of other prior art of record for leading such the implementation to the claimed invention.

-Regarding to independent claim 12, none of prior art of record teaches or suggests the invention as claimed. Maskara et al teaches the claimed system except that in his system, he teaches a signal sequence as claimed, but he fails to teach a procedure of using said signal sequence at a mobile station to determine a timing of a base station wherein timeslot synchronization is achieved between the base station and the mobile station using the signal sequence transmitted over a synchronization channel. It would not have been obvious for one skilled in the art to implement Maskara et al in view of other prior art of record for leading such the implementation to the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
